§ 01 Summary

PROFILE • POSITIONING

Senior engineer and platform architect specialising in connected-TV streaming systems. Ten-plus years architecting cross-platform media frameworks at broadcast scale — including the OTT framework powering 50+ Nexstar TV brands, a Kotlin Multiplatform data layer consumed across Android, Fire OS, webOS & Tizen, plugin-based third-party integration systems, and JNI/C++ work on Uber's Maps SDK. As an independent contractor I run multiple client engagements in parallel — at any given time only one is full-time, with the rest as part-time concurrent contracts.

Nexstar Media Group, Inc.

Aug 2025 – Present · current

Senior Fire OS / Android TV Engineer · via Nimble.LA · full remote

FULL-TIME CONTRACT

- Architected an enterprise **OTT streaming framework** powering **50+ TV station brands** across Fire TV and Android TV using **MVVM + Clean Architecture** with a plugin-based integration layer for third-party services.
- Built five specialised **Media3 / ExoPlayer** implementations covering VOD, live, and audio playback with HLS adaptive bitrate.
- Shipped DRM-protected playback (**Widevine, PlayReady, FairPlay**) with both server-side and client-side ad insertion.
- Integrated **12+ analytics platforms** (Adobe Analytics, mParticle, Nielsen DCR, ComScore, Permutive, BlueConic) under GDPR / CCPA compliance.
- Delivered TV-optimised auth (passwordless, magic link, QR-code), entitlement & flexible paywall, and zero-downtime feature rollouts across **50+ product flavors** via remote config; built Leanback TV UI with full d-pad navigation.
- Refactored callback chains to reactive Kotlin **SharedFlow**; resolved fragment-lifecycle leaks; wired **Firebase Crashlytics + New Relic** with JUnit, Mockk, Robolectric, Espresso coverage.

Android / Android TV / Fire OS Engineer · full remote

LONG-TERM PART-TIME CONTRACT

- Led the **full migration of the legacy Java codebase to Kotlin**; introduced Use-Case + Clean Architecture and improved end-user UX.
- Implemented **HLS / DASH** playback for **live linear TV and VOD** with Widevine DRM-protected streaming; integrated Google Cast and a paid subscription gateway.
- Maintained and developed companion apps on **webOS and Tizen** alongside the Android TV / Fire OS surfaces.
- Integrated **OTA tuner platforms** (HDHomeRun, AirTV, Alticast, PDAQ) with GStreamer-based media pipelines for secure live broadcast over HLS / DASH.
- Owned **DRM, EPG, tuner orchestration, transcoding**, and multi-device streaming end-to-end.
- Shipped on Google Play (*Select TV Android, FreeCast Watch*) and Amazon (*FreeCast Watch Fire OS*).

Android TV / Fire OS Engineer · full remote

CONCURRENT PART-TIME CONTRACT

- Greenfield Android TV / Fire OS app for one of Brazil's largest pay-TV operators; **4K streaming** via DASH / HLS with multi-DRM.
- Architected the data layer as a shared **Kotlin Multiplatform (KMP)** submodule consumed by Android, webOS and Tizen clients.
- Multi-module **MVVM** architecture; Media3 playback; analytics across Firebase + Google Analytics 4.

Uber Technologies

May 2021 — May 2022 · 1 yr

Android Engineer · Maps SDK team · via Matchpoint Solutions · full remote

CONCURRENT PART-TIME CONTRACT

- Worked on the **Maps team SDK** module — JNI/C++ bindings between Uber's native Maps engine and the Android client.
- Contributed to Uber's open-source Android architecture framework (**RIBs**); shipped to Uber Rider, Uber Eats and Uber Driver.
- Operated inside a 10K+ engineer codebase using **Buck, Flipper**, custom analytics / logger / crash reporter and a feature-by-module architecture.

Android Engineer · full remote

PART-TIME CONTRACT

- Re-modelled the home page of **Casas Bahia** and **Pontofrio** — converted a static product shelf into a fully dynamic, backend-driven shelf system.
- Implemented end-to-end analytics tracking for product clicks and shelf scroll-depth via Firebase Analytics and custom API calls.

Jenkins CI/CD

Super Revendedores

Oct 2018 — Feb 2021 · 2 yrs 5 mo

Android Engineer · full remote

- Migrated the full codebase from Java to Kotlin; implemented **online payment gateway**, virtual showcases and an SSO link to a partner web ordering portal.
- Built scalable asynchronous order processing on **AWS SQS / SNS** for reliable queuing and notification delivery.

§ 03 Selected Personal Work

INDEPENDENT · OPEN SOURCE · RESEARCH

Arquive

Self-hosted personal media archive & streaming server. In-browser **HLS playback** with GPU-accelerated transcoding cache, **IPTV** (M3U + XMLTV EPG + recording), DLNA/UPnP for smart TVs, distributed GPU-fleet transcoding, FAISS-backed face recognition, local-AI captions via Ollama, plus a native **Apple TV (SwiftUI)** client.

Python React HLS · GPU Transcoding
FAISS · InsightFace Ollama · Qwen2.5-VL DLNA
M3U · XMLTV SwiftUI tvOS

Multi-Agent Course Creator

Reference implementation of a **multi-agent AI system** on **Google ADK + Agent-to-Agent (A2A) protocol**, deployed on Cloud Run. Four specialised LLM agents in a Researcher → Judge → Content Builder pipeline with session-state propagation, structured Pydantic outputs, and authenticated inter-agent communication.

Python Google ADK A2A Protocol Pydantic
Google Cloud Run LLM Orchestration

Beer Price Calculator

Android app to find the best beer value (price / ml) with history, mini line / bar / pie / heat-map insights, PT / EN localisation, Play Billing subscriptions and coupon-based unlocks. Published on the Play Store.

Kotlin Jetpack Compose Hilt Room
Coroutines / Flow Play Billing Material 3

DynamicMusicApp

Android music player with **three pluggable design systems** users switch at runtime — *Material You* (Google), *Neon Wave* (synthwave), and *Organic Flow* (botanical). One Compose codebase, three radically different visual identities — design-system theming treated as a first-class architectural concern.

Kotlin Jetpack Compose Material 3 MVI
Coroutines / Flow Hilt

iSpeakPDF

Privacy-by-design web platform converting PDFs to natural-sounding audio entirely in-browser via WebAssembly + Web Workers — no document leaves the device. WCAG-aligned UI, on-device neural TTS with sentence chunking, OCR fallback for scans, subscription tiers and usage limits.

Next.js · React TypeScript
WebAssembly · Web Workers PDF.js WebGPU
Supabase Stripe

Custom BTC Cache Miner

Research-grade multi-pool Bitcoin SHA-256d **CUDA** miner that tests the same nonce across concurrent Stratum and GBT sources with safe hot-swaps and a VRAM cache (~85% utilisation, dedup, adaptive watermarks). CPU double-SHA-256 verify, crash-safe outbox.

C++ · CUDA CMake nlohmann::json OpenSSL
Windows · Linux

§ 04 Education

FORMAL · CONTINUING

Instituto Infnet · Rio de Janeiro

B.S. Computer Engineering — software development, mathematical modelling, OS & hardware architecture.

2013 — 2018

Chiswick House School (Malta)

K-12 / High School Diploma.

1997 — 2005
